

Business Process Automation with VBA and Python

Mr. Eddie Chow / 5 April 2025

Table Of Contents

Introduction to business process automation

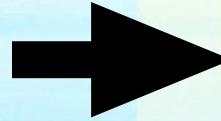

Business Process automation with VBA

Business process automation with Python

Introduction to project management for business process automation

Development and implementation of business process automation

Final Group Presentation

What is Process Automation, RPA, IPA?

Overview of the technological building blocks related to process automation

Contemporary tools for process automation

Challenges and opportunities of business process automation

Business implications of process automation

Benefits of Using Automation in Project Management

1. Establishing Risks to be Managed

- Real-Time Risk Monitoring: Automation allows for continuous monitoring of project parameters, enabling teams to identify potential risks as they arise rather than after the fact. This proactive approach enhances the ability to mitigate risks effectively before they escalate
- Data Analysis and Predictive Insights: Automated systems can analyze large volumes of data to identify trends and patterns that may indicate emerging risks. This predictive capability allows project managers to prepare for potential challenges and implement strategies accordingly

2. Establishing Costs and Durations

- Accurate Cost Estimation: Automation tools can analyze historical data and current project metrics to provide more accurate cost estimations. This helps in budgeting and financial planning by reducing guesswork and improving reliability
- Streamlined Reporting: Automated reporting features generate cost and duration reports quickly, providing stakeholders with timely insights into project status without manual compilation efforts. This enhances transparency and facilitates informed decision-making

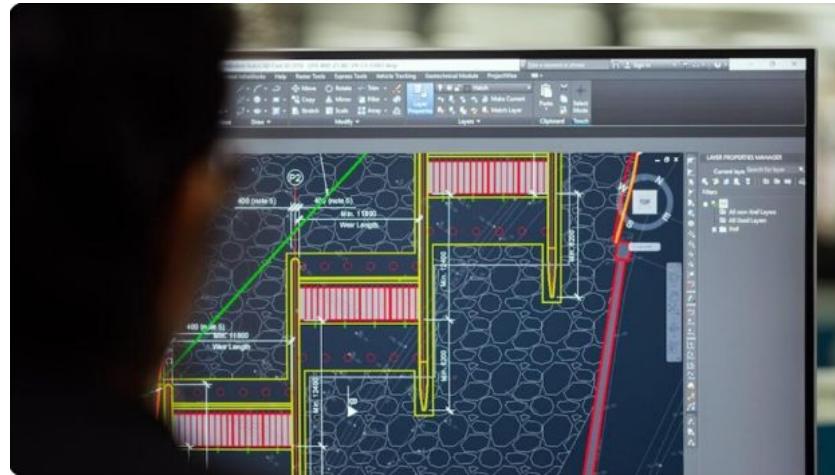

3. Establishing Resources Required

- Resource Optimization: Automation helps in tracking resource allocation and utilization across projects. By analyzing resource usage patterns, organizations can optimize their workforce and materials, ensuring that resources are used efficiently
- Scalability: Automated systems can easily scale to accommodate changes in resource requirements as projects grow or shrink. This adaptability ensures that organizations do not overcommit or underutilize their resources

Understanding Business Process Automation

Defining the Future of Efficiency

- Definition: Business process automation (BPA) refers to the use of technology to automate repetitive, manual tasks in business operations to increase efficiency and accuracy.
- Benefits: The advantages of BPA include reduced operational costs, increased speed and accuracy of processes, and the ability to reallocate human resources to more strategic tasks.
- Tools: Various tools such as workflow automation software, robotic process automation, and AI are instrumental in facilitating BPA by removing bottlenecks in business operations.
- Examples: Common applications include automating invoice processing, customer relationship management (CRM), and supply chain management, demonstrating BPA's versatility across industries.

Integration of Project Management and Business Process Automation

Creating Cohesion for Success

Scope	Description
Synergy	The integration of project management with BPA leads to improved planning, execution, and monitoring of initiatives, enhancing overall project success.
Process Mapping	Visualizing workflows and processes aids in identifying inefficiencies and opportunities for automation, aligning project management initiatives with business objectives.
Best Practices	Employing best practices such as stakeholder engagement, risk management, and iterative development can significantly improve project outcomes in automation.
Alignment	Ensuring that project management frameworks align with automation goals fosters a culture of continuous improvement and operational excellence within the organization.

Integration of Project Management and Business Process Automation

Understanding the Fundamentals

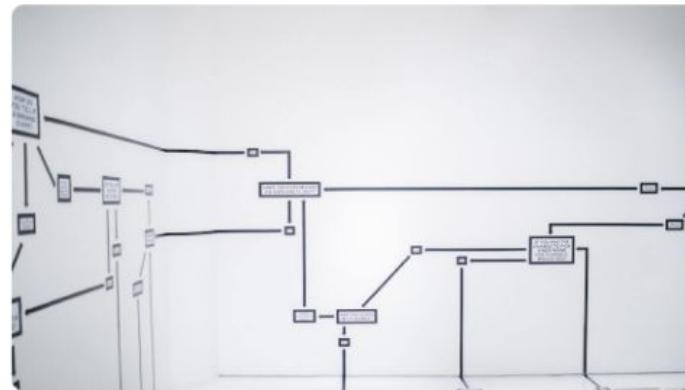

- Definition: Project management is the discipline of planning, organizing, and overseeing the successful execution of projects in the context of business process automation, which aims to optimize workflows and improve efficiency.
- Importance: The significance of project management in business process automation lies in its ability to streamline processes, enhance productivity, and ensure resources are effectively utilized to meet business objectives.
- Goals: The primary objectives encompass enhancing efficiency, reducing costs, improving quality and ensuring successful project delivery that meets stakeholder expectations.
- Overview: An effective project management approach integrates all phases of automation projects, from inception through to evaluation, thus providing a comprehensive roadmap for implementation.

Key Steps in Project Management

The Phases of Project Execution

- Initiation: Defining the project scope, objectives, and stakeholders to establish a shared understanding of the project goals and outcomes.
 - Planning: Creating a detailed project plan that outlines tasks, timelines, resources, and budget, ensuring a clear pathway toward project completion.
 - Execution: Implementing the project plan, coordinating teams, and managing resources to deliver the project output effectively.
 - Monitoring: Continuous oversight of project progress, ensuring alignment with goals, addressing any deviations, and making necessary adjustments to stay on track.
 - Closing: Finalizing all project elements, conducting evaluations, and documenting lessons learned to inform future projects and ensure comprehensive closure.

Project Management Tasks Priority Tutorial

We are going to conduct an booking management System. In working out the project, we apply python to create 2 sprint within 2 weeks that include 8 tasks

```
# First install required packages
import pandas as pd
import os
import plotly.express as px
from datetime import datetime

CSV_FILE = "bookingsystem_tasks.csv"
# Initial sample tasks for an booking management system
tasks = [
    # Sprint 1 - Core Features
    {"Task": "User Authentication", "Start": "2023-01-01", "Finish": "2023-01-05", "Priority": "Must-Have", "Sprint": 1},
    {"Task": "Property Listing CRUD", "Start": "2023-01-03", "Finish": "2023-01-07", "Priority": "Must-Have", "Sprint": 1},
    {"Task": "Booking System Core", "Start": "2023-01-06", "Finish": "2023-01-10", "Priority": "Must-Have", "Sprint": 1},
    {"Task": "Basic Search Filters", "Start": "2023-01-08", "Finish": "2023-01-12", "Priority": "Should-Have", "Sprint": 1},
    # Sprint 2 - Enhanced Features
    {"Task": "Payment Integration", "Start": "2023-01-15", "Finish": "2023-01-19", "Priority": "Must-Have", "Sprint": 2},
    {"Task": "Review System", "Start": "2023-01-17", "Finish": "2023-01-21", "Priority": "Should-Have", "Sprint": 2},
    {"Task": "Recommendation Engine", "Start": "2023-01-20", "Finish": "2023-01-24", "Priority": "Could-Have", "Sprint": 2},
    {"Task": "Social Media Login", "Start": "2023-01-22", "Finish": "2023-01-26", "Priority": "Could-Have", "Sprint": 2}
]
```

Project Management Tasks Priority Tutorial

(Continue)...

We define function that save all tasks into csv file named “bookingsystem_tasks.csv”

```
def save_tasks_to_csv(tasks, csv_file):
    df = pd.DataFrame(tasks)
    if not os.path.exists(csv_file):
        df.to_csv(csv_file, index=False)
        print(f"Created new CSV file with sample tasks at {csv_file}")
    else:
        print(f"CSV file already exists at {csv_file}. Overwriting...")
        df.to_csv(csv_file, index=False)
        print(f"Updated tasks saved to {csv_file}")
```

```
#Main Program
save_tasks_to_csv(tasks, CSV_FILE)
```

Task	Start	Finish	Priority	Sprint
User Authentication	1/1/2023	5/1/2023	Must-Have	1
Property Listing CRUD	3/1/2023	7/1/2023	Must-Have	1
Booking System Core	6/1/2023	10/1/2023	Must-Have	1
Basic Search Filters	8/1/2023	12/1/2023	Should-Have	1
Payment Integration	15/1/2023	19/1/2023	Must-Have	2
Review System	17/1/2023	21/1/2023	Should-Have	2
Recommendation Engine	20/1/2023	24/1/2023	Could-Have	2
Social Media Login	22/1/2023	26/1/2023	Could-Have	2

Project Management Tasks Priority Tutorial

Task 2 : We are going to generate and display gantt chart based on previous tasks.

```
csv_file = "bookingsystem_tasks.csv"

#define function to load tasks from csv
def load_tasks_from_csv(csv_file):
    if not os.path.exists(csv_file):
        print(f"Error: CSV file not found at {csv_file}. Please run save_tasks.py first.")
        return None
    else:
        df = pd.read_csv(csv_file)
        df['Start'] = pd.to_datetime(df['Start'])
        df['Finish'] = pd.to_datetime(df['Finish'])
        return df
```

Project Management Tasks Priority Tutorial

(Continue)... Here we define function that generate gantt chart and save as png

```
def display_gantt_chart(df):
```

```
    color_map = {  
        'Must-Have': '#FF4C4C', # Red - Critical  
        'Should-Have': '#FFA500', # Orange - Important  
        'Could-Have': '#4CAF50' # Green - Nice-to-have  
    }
```

```
    fig = px.timeline(  
        df,  
        x_start="Start",  
        x_end="Finish",  
        y="Task",  
        color="Priority",  
        color_discrete_map=color_map,  
        title="Housing Booking System Project Schedule",  
        labels={"Task": "Development Tasks"},  
        hover_data=["Sprint"]  
    )
```

```
    fig.update_yaxes(autorange="reversed")  
    fig.update_layout(xaxis_title="Timeline",yaxis_title="Tasks",hovermode="y  
unified",showlegend=True,bargap=0.2,height=500)
```

```
    fig.add_vline(x=datetime(2023, 1, 14), line_dash="dot", line_color="gray")  
    fig.add_annotation(x=datetime(2023, 1, 14), y=1.05, text="Sprint 1 Completion", showarrow=False)
```

```
# Save Gantt chart as PNG
```

```
fig.write_image("bookingsystem_ganttchart.png", scale=3)
```

```
fig.show()
```

Project Management Tasks Priority Tutorial

(Continue)... Main Program to run function to generate chart

```
#Display Gantt Chart
```

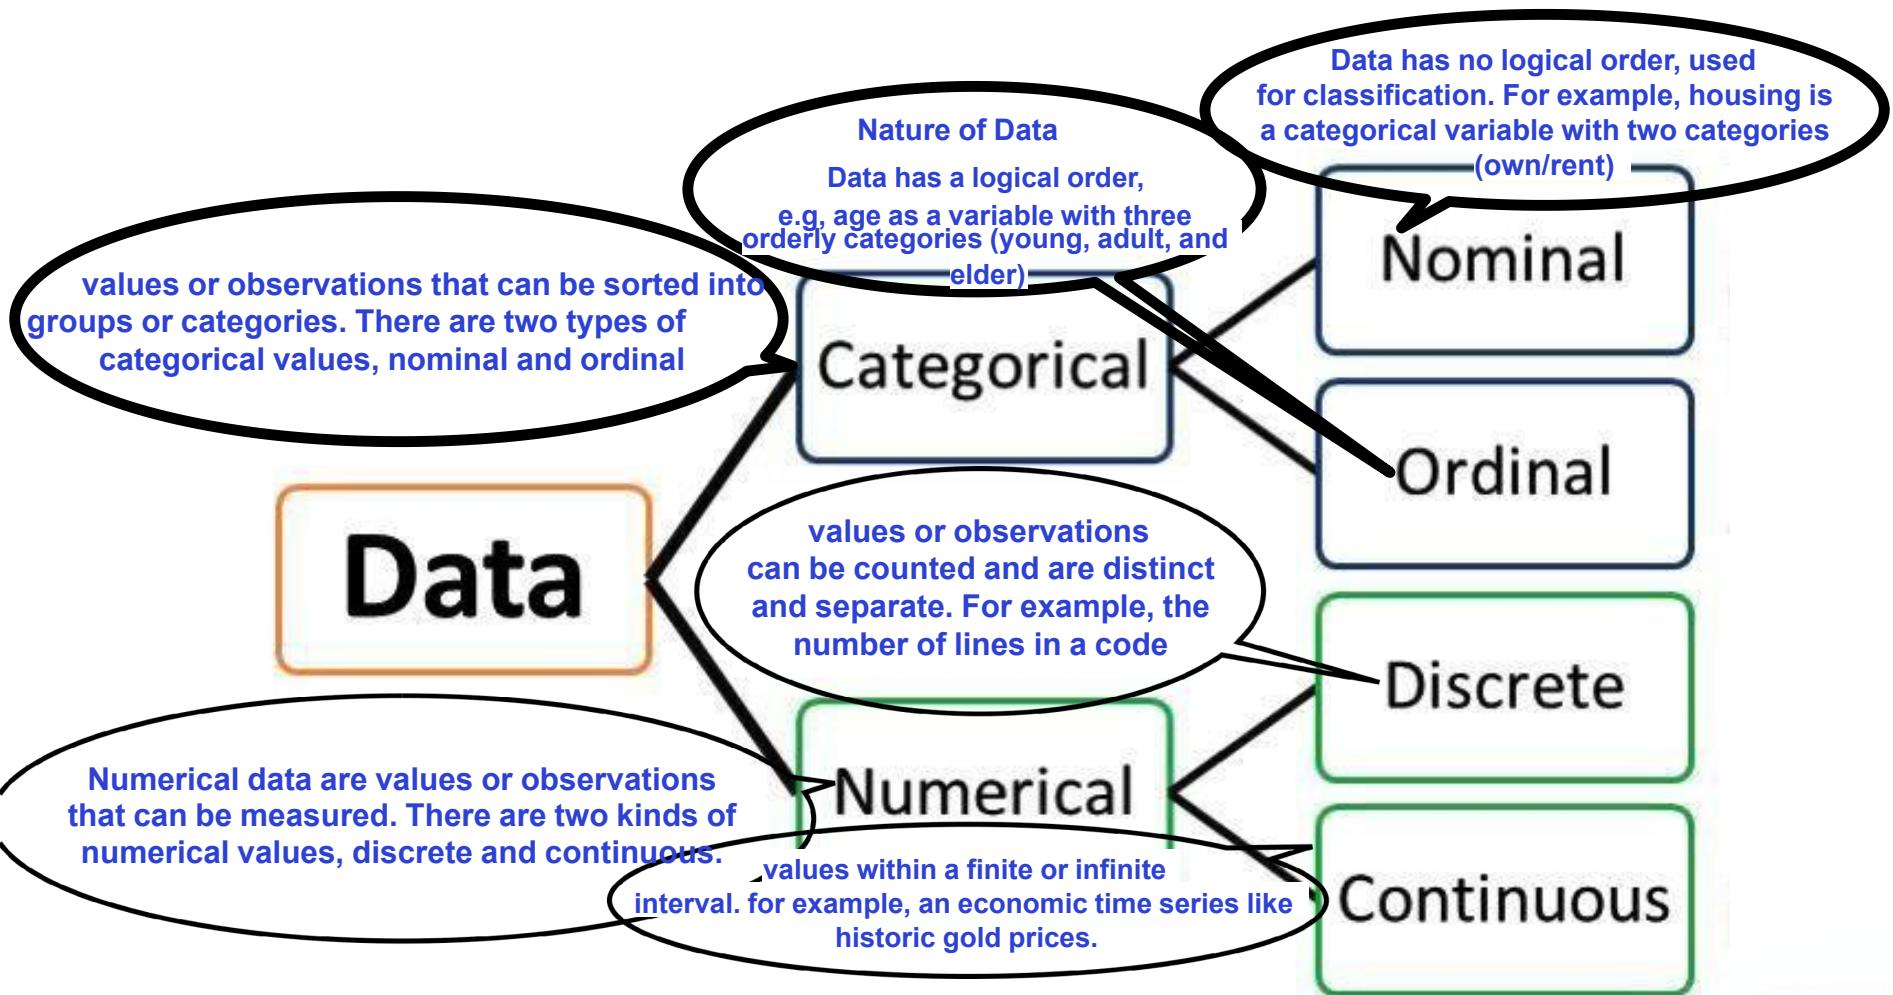

```
df = load_tasks_from_csv(CSV_FILE)
```

```
if df is not None:
```

```
    display_gantt_chart(df)
```

Application of AI In Banking: A Case Study

https://twitter.com/_/status/790943639933366274

Chatbot enabled mobile banking has seen steady growth from 12 million customers in 2012 to nearly 22 million in 2016

The screenshot shows a mobile banking application interface for the Erica chatbot. At the top, it says "erica". Below that, a message states: "Based on your typical monthly spending, you have an additional \$150 you could be putting toward your Cash Rewards Visa. This could save you up to \$300 per year." Underneath, there's a section titled "Additional Payment" with a slider. The slider scale goes from "\$0" to "\$1540" with a midpoint at "\$150/mn". Below the slider, "Payment Details" are listed: Current \$250, New \$400, and Annual Savings \$300. At the bottom, it says "Next Scheduled Payment: Nov 17" followed by a calendar icon.

Erica - Chatbot is designed to be accessible to clients 24/7 and perform “day-to-day transactions” in addition to anticipating the unique financial needs of each customer and helping them reach their financial goals by providing smart recommendations

Application of AI In Banking: A Case Study

Bank of New York Mellon Bank: Software Automation Using Robots

Helped build/deploy 220 software robots to handle repetitive tasks, such as “data requests from external auditors” and “funds transfer bots” which help “correct formatting and data mistakes in requests for dollar funds transfers.

- 100 percent accuracy in account-closure validations across five systems
- 88 percent improvement in processing time
- 66 percent improvement in trade entry turnaround time
- ¼-second robotic reconciliation of a failed trade vs. 5-10 minutes by a human

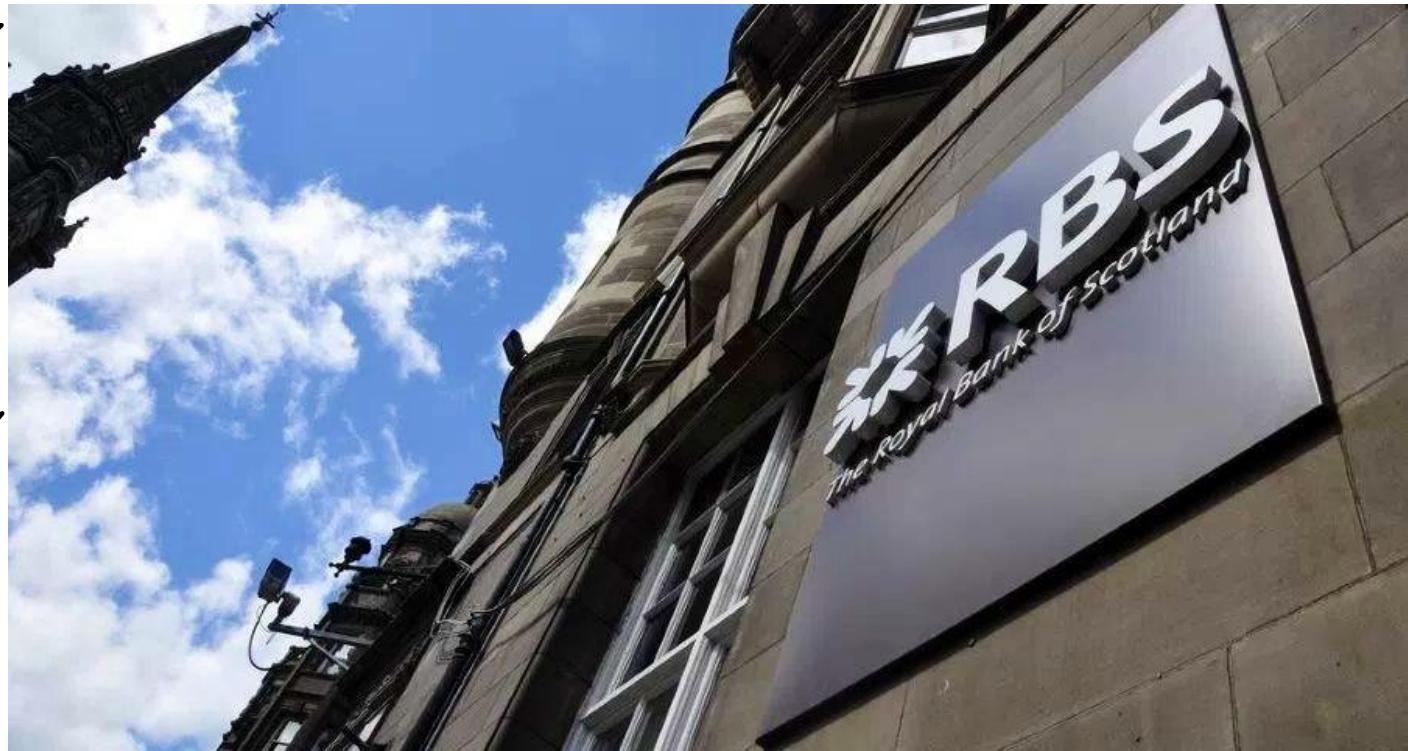

“funds transfer bots” alone is responsible for \$300,000 in annual savings
